ARB Presentation Interface and Mapping Capture

3/1/2011

IS Manager: Chandra Bommas

Project Manager: Jeff Bridwell

Technical Lead:

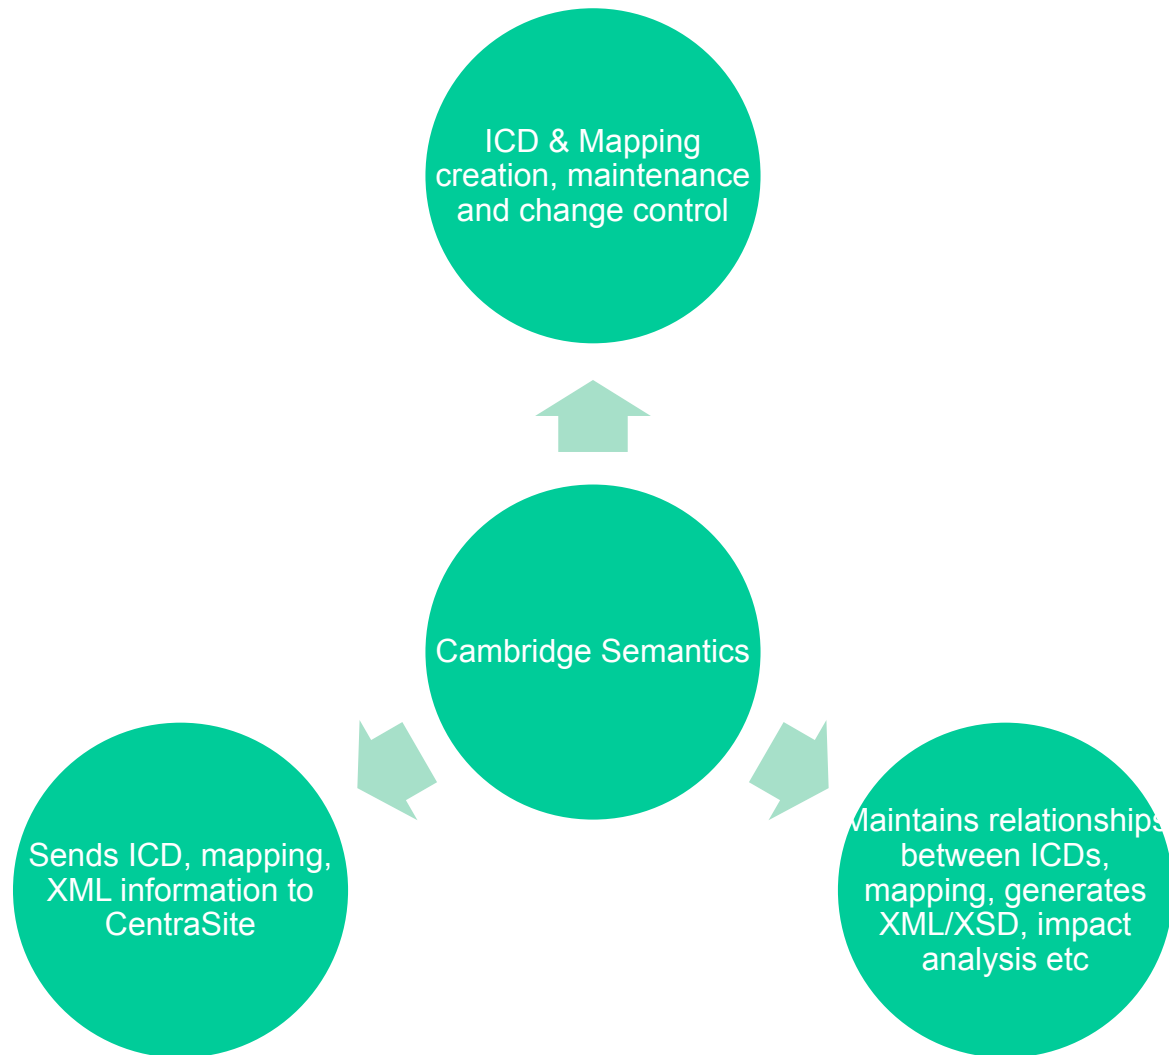

Context: Business Problem Solved

- ***The ICD and mapping process used by teams that integrate with the ESB is very important for capturing necessary information and delivering quality.***
- ***The current process uses Microsoft Office documents as design artifacts.***
- ***We run into many difficulties with collaboration, visibility to change and process status involving the documents. There are many challenges in the creation, change control, coordination and distribution of these documents.***
- ***We have run a Black Belt project around this process that aims to reduce duration of the process from 45 days to < 35 days. This reduction can lead to an annual savings of \$250k within the ESB organization for the design phase alone. Savings may be substantially more when we factor in labor for other teams and extend the return across the development and testing cycle.***

Compliance / Governance Strategy

- ***Tier 4***
- ***No credit card or sensitive data***
- ***Data will support ESB and SOA design process for interfaces -***
- ***No GL requirement***
- ***No financial data involved***

Context: System Context Diagram

Context: Application Architecture Diagram

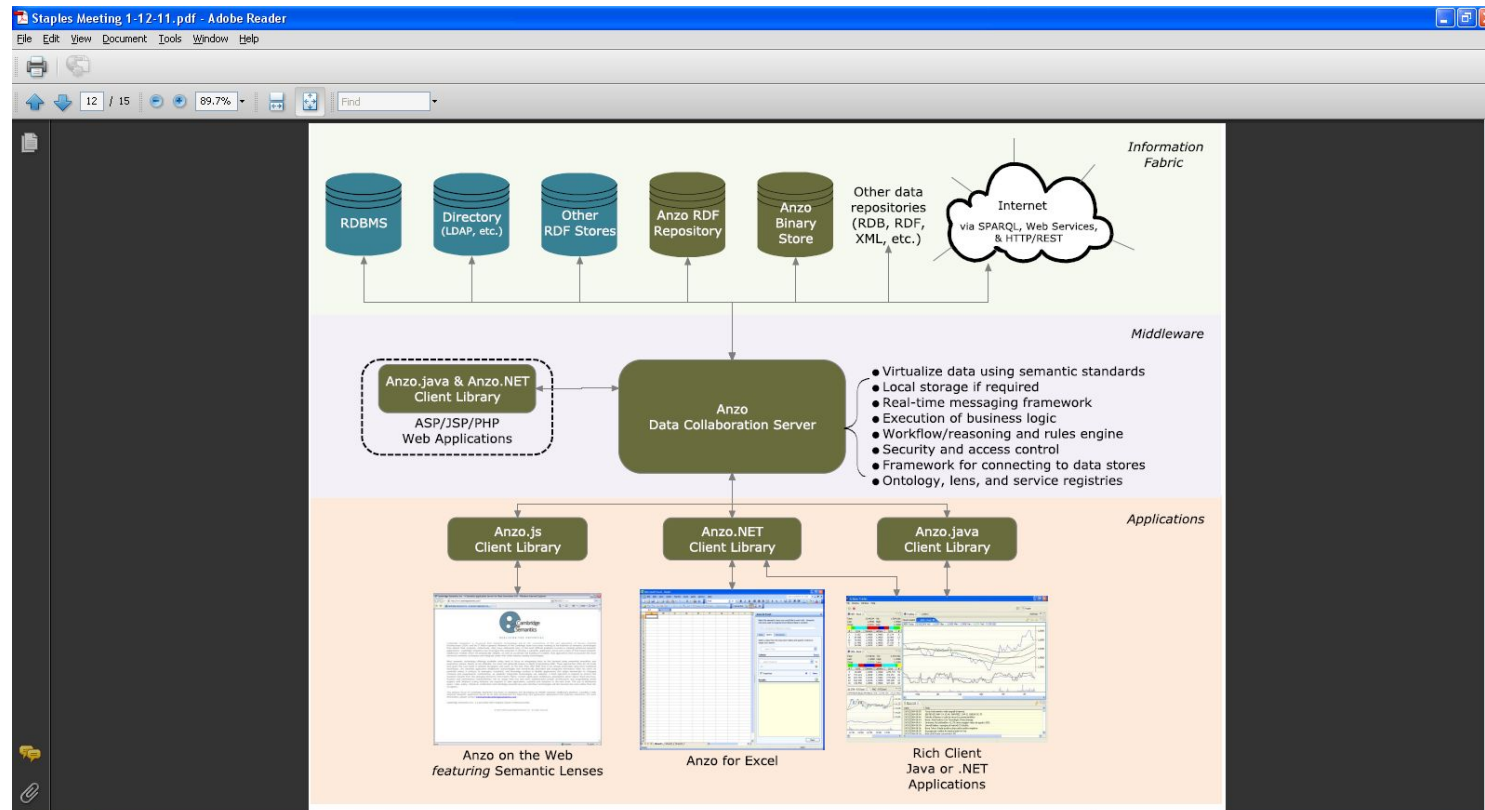

that was easy.™

Language: Java/ Eclipse OSGI

OS: Red Hat Linux

App Server: None required

Support Excel 2007 and IE 8.x, Chrome, Firefox etc.

Context: Infrastructure Diagram

CambridgeSemantics
Red Hat Linux
VM 4 CPU 8GB RAM
Final Sizing TBD

CentraSite
Red Hat Linux
